## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1 and 6-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Burrows et al. (US 6,013,538).

With regard to claim 1, Burrows et al. disclose an organic light-emitting device, O-LED having at least two layers of laminated film (col. 3, line 65 to col. 15, line 17 and fig. 5) comprising:

- A hole transportation layer 116H that defines a first film forming region (col. 10, line 4 and fig. 5);
- A light-emitting layer 116E that defines a second film formation region, which covers the first film-forming region (col. 10, line 3 and fig. 5).

With regard to claim 6, Burrows et al. disclose the hole transportation layer 116H and the light-emitting layer 116E are deposited between a cathode and an anode, and where light emitted by the light-emitting layer 116E is output through the cathode (col. 4, lines 13-17 and col. 9, la 49-52).

With regard to claim 7, Burrows et al. disclose a bank for defining the first and second film formation regions (fig. 5).

With regard to claim 8, Burrows et al. disclose corners of the first and second film formation regions are rounded (fig. 5).

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Burrows et al. (US 6,013,538).

With regard to claim 8, Burrows et al. disclose corners of the first and second film formation regions with rounded corners (fig. 5), but do not disclose the bank has a rounded shape, However, Since the applicant has not established the criticality of the shape stated in the claim and since the rounded shape is in common use in similar devices in the art, it would have been obvious to one of ordinary skill in the art to use the rounded shape in the device. Where

patentability is said to be based upon particular chosen shape or upon another variable recited in a claim, the applicant must show that the chosen rounded shape are critical. In re Woodruff, 919 F2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).
